SmartBase

Perfect for Hard Surfaces

The Biohort SmartBase Foundation is the ideal foundation for concrete or paved areas. It consists of high-quality aluminium boards, a special foundation frame and height-adjustable feet. So light ground irregularities of up to 4 cm can be compensated.

Time of Assembly: 1 - 2 hours for two (depending on workmanship and size) **Tools*:** spirit level, hammer drill, drill bit \emptyset 9 mm, open-end spanner SW13 and SW24.

- **1. Assembly of the Frame:** Fasten corner brackets and lateral bracing on the joists and frames.
- **3. Fasten the Adjustable Feet:** Screw the adjustable feet to the surface.
- 2. Attach the Adjustable Feet:

Attach the adjustable feet and adapter plates to the frame. Use a spirit level to level the frame assembly.

4. Laying the Floor: Insert and fix the aluminium floor boards.

* not included in the delivery

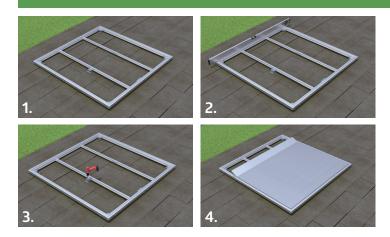

Advantages

- Compensation of unevenness through adjustable feet
- Easy to remove if necessary
- Precisely fitted to all Biohort garden sheds, the Equipment Locker and the MiniGarage
- Storm proof
- Load bearing capacity max. 200 kg/m²

Standard Equipment:

- Aluminium floor boards with grooved surface
- Specially designed foundation frame
- · Galvanised adjustable feet
- · Adjustable feet with height adjustment
- Integrated water barrier to protect against water ingress

Floor frame and floor plates are no longer necessary!

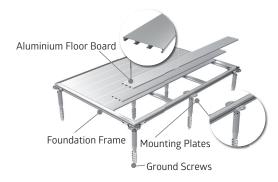

SmartBasePLUS

Optimal Solution for Slope

Unlike the SmartBase foundation, the patented SmartBase PLUS system includes ground screws instead of adjustable feet. These are screwed directly into the ground and can compensate slopes of up to 15 cm. For this, the soil should be compact and free of large stones and roots.

Time of Assembly: 2 - 4 hours for two (depending on workmanship and size) **Tools*:** hammer drill, drill bit \emptyset 40 x 570 mm, spirit level, drill, open-end spanner SW13 and SW24, shovel.

- **1. Prepare Assembly Site:** Remove earth with a spade to a depth of approx. 10 cm and mark the position of the ground screw holes.
- **2. Screw in Ground Screws:** Pre-drill with a hammer drill and insert the ground screws with the tool provided.
- **3. Attach the Mounting Plates:** Connect the mounting plates onto the ground screws and level with a spirit level.
- **4., 5., 6.** Attach the Frame and Aluminium Floor Panels: Position the frame and joists and fasten them securely with the mounting hardware. Insert and fix the aluminium floor boards.

* not included in the delivery

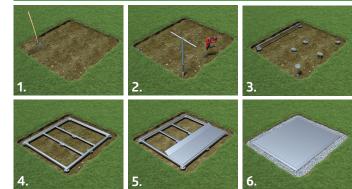

Advantages

- Little excavation
- · Gravel base is not necessary
- Compensation of unevenness through ground screws
- Easy to remove if necessary
- Precisely fitted to all Biohort tool sheds, the Equipment Locker and the MiniGarage
- Storm proof
- Load bearing capacity of max. 200 kg/m²

Standard Equipment:

- Aluminium floor panels with grooved surface
- Specially designed foundation frame
- Galvanised ground screws
- Multi-adjustable mounting plates
- Including manual screw-in driver
- Integrated water barrier to protect against water ingress

Floor frame and floor plates are no longer necessary!

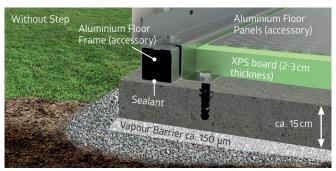

Alternative

Foundation Solutions

More Information: biohort.com/ foundation

Concrete Foundation

A reinforced concrete foundation slab on a gravel base is an optimal, but also expensive foundation. With this type of foundation you must also make sure that no water can penetrate into the shed at ground level. The stepped foundation slab with a circumferential step of 2 cm x 7 cm is an ideal design.

As an alternative to the stepped concrete foundation slab surface, a continuous flat concrete slab can also be poured. The available aluminium floor frame accessory makes it easier to level out any unevenness in the foundation and as well in fitting a sealing joint. The aluminium floor frame also allows the use of the aluminium floor panels, which can be underlayed with 2-3 cm thick XPS hard foam boards. The XPS hard foam boards not included in the delivery.

Point Foundation

Biohort Aluminium Floor Frame with a Point Foundation

Another possibility for installing level and storm proof Biohort garden sheds on very uneven and soft ground is a point foundation in combination with a Biohort floor frame. The foundation points are to be made at the specified locations with a minimum size of 30 x 30 cm. The excavation for the foundations must be sufficiently deep (frost-proof).

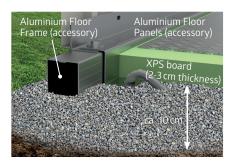

Paving Slabs

Aluminium Floor Frame on Paving Slabs

A good and inexpensive solution are paving slabs on a gravel base. These paving slabs are available from specialist dealers in various surfaces and colours. We strongly recommend the use of the aluminium floor frame.

Floor Frame

Biohort Aluminium Floor Frame and Floor Panels on a Gravel Base

With the aluminium floor frame (accessory) you can also set up the shed on a gravel base and anchor it with storm-proof ground anchors (ground anchors are included). The aluminium floor panels (accessory) serve as a functional floor and are underlaid with XPS hard foam boards (XPS hard foam boards not included in the delivery).

Quality

- Hot-dip galvanised steel ground screws / adjustable feet
- · Aluminium frame rails
- High-quality aluminium grooved floor boards
- · Lifetime maintenance free

Assembly

- · Quick assembly
- No curing time as with a concrete foundation
- The shed can be installed immediately after completion of installation
- · Easy to remove if necessary
- Precisely fitted to all Biohort garden sheds, the Equipment Locker and MiniGarage
- · Assembly service available upon request

~.~ Sunctionality

Functionality

- Integrated water barrier to protect against water ingress
- Compensation of ground unevenness and slopes (extensions are available on request for larger differences in height)
- Suitable for all load-bearing soil types
